

LAMENESS ASSESSMENT

Operation name: _____

Protocol:

- Assess 100 birds from each flock 1 - 7 days prior to slaughter
- Assess birds in 4 different locations
- Watch one turkey walk at a time
(a gentle nudge from behind might be needed to get the bird moving)
- Put a mark next to the lameness score observed

Flock ID: _____

Date: _____

Score 0	Score 1	Score 2
Normal	Moderately Lamé	Severely Lamé
Foot may or may not curl when lifted by the turkey Smooth gait typically with even steps that may be uneven at times Well-balanced Able to walk quickly and/or run Difficult to identify any abnormality when walking or running	Uneven gait Foot does not curl when lifted by the turkey Irregular, short strides Poor balance The turkey: ~ may use one or both wings to help balance while walking ~ squats within 15 seconds of standing or being forced to move by gentle nudging ~ may lie down after several steps	The turkey: ~ is reluctant or unable to move, or shuffles on the ground if forced to move by gentle nudging ~ uses wings to help with movement ~ takes at most a few steps, if any
